
Signs of Early Psychosis

Early psychosis and psychosis risk symptoms look different from the acute symptoms of psychosis, Look for the following changes:

- *Drop in grades or job performance*
- *New trouble with focus and concentrating*
- *Suspiciousness, paranoid ideas or uneasiness with others*
- *Withdrawing socially*
- *Thoughts and feelings that are new, or out of character*
- *Decline in personal hygiene*
- *Difficulty telling reality from fantasy*
- *Confused speech or trouble communicating*
